Myone

Product engineering for *payments*, *communities* and *marketplaces*.

Myone Solutions Ltd.
Lagos, Nigeria

Project portfolio
November 2026

Contact
hello@myone.ng

WHO WE ARE

Built end to end, from PRD to app store.

We design and build web and mobile products end to end: from the first requirements document to the app store, and the payment rails underneath. Small senior team, honest timelines, no hand-offs.

Platforms
Web, iOS, Android, APIs and admin consoles

Rails we know
Paystack, Stripe, Flutterwave, NIBSS, Mono, Fineract

Building since
2019, across banking, auctions, media and community apps

WHAT WE DO

01

Product engineering

Web and mobile products built end to end: typed APIs on NestJS and PostgreSQL, React and Next.js front ends, Flutter and React Native apps shipped to the stores.

02

Payments and fintech

Checkout and settlement on Paystack, Stripe and Flutterwave; NIBSS instant payments; Mono and Fineract core banking; wallets, virtual accounts, idempotent webhooks and reconciliation.

03

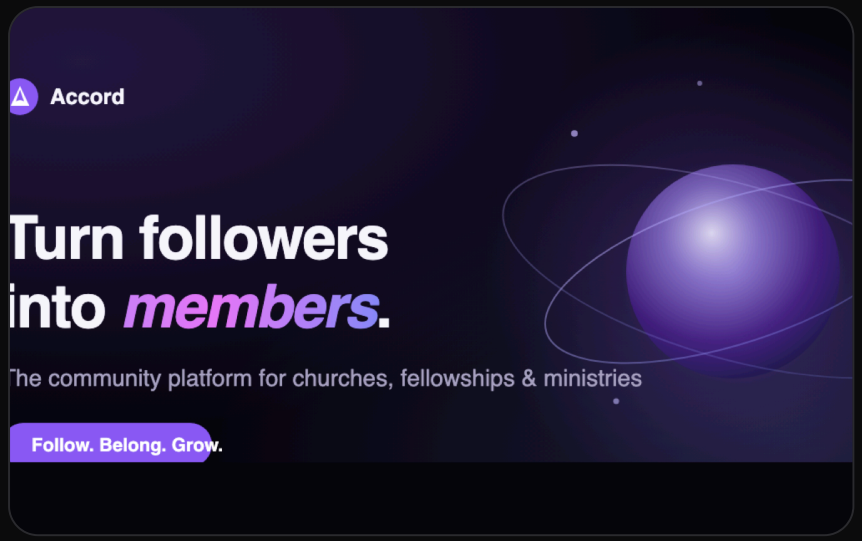

Real-time and media

Live bidding, chat, location feeds and audio and video broadcasting: Socket.IO, PostGIS, streaming relays and background audio that hold up on Nigerian networks.

04

Admin tooling and operations

Back-office consoles, role-based access, audit trails, moderation and reporting, so your team can run the product every day without calling us.

Myone product · 2025 – 2026

LIVE

Accord

A church and ministry platform that turns followers into members, with QR attendance, services and live streams, groups, events, giving and messaging in one place.

OUR ROLE
Product design, engineering and launch

PLATFORMS
iOS, Android, Web admin, API

STATUS
Live, iOS on the App Store, Android in release

LINK
accordsuite.com

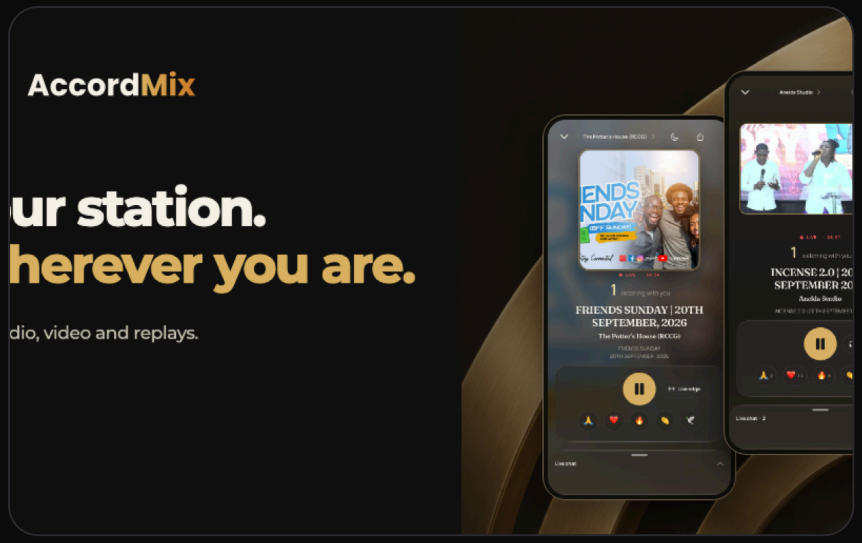

NestJS · Fastify · PostgreSQL · Drizzle · Redis · Socket.IO · Next.js 15 · Astro · Flutter

WHAT WE BUILT

- A follower-to-member funnel: anyone can follow an organisation in the Accord app, and admins can invite followers into membership with the right roles.
- QR attendance check-in with location, so services and events capture who came without a register.
- Services, live streams and AI sermon summaries generated from YouTube transcripts.
- Groups, departments and events with RSVP.
- Giving through Paystack, Stripe and Flutterwave, with email, SMS and push messaging to segments.
- Prayer requests and an organisation wall.

WHERE IT STANDS

Live on the App Store with the Android build in release. Core features are complete and early pilots are under way.

Myone product · 2026

● LAUNCHING

AccordMix

An audio-first live broadcasting network for churches: a studio for broadcasters and a listener app with live rooms, replays and chat that works on a weak connection.

OUR ROLE
Product design, streaming infrastructure, apps

PLATFORMS
iOS, iPad, Android, Web, Desktop

STATUS
Launching, Store listings prepared, submission in progress

LINK
listen.accordmix.com

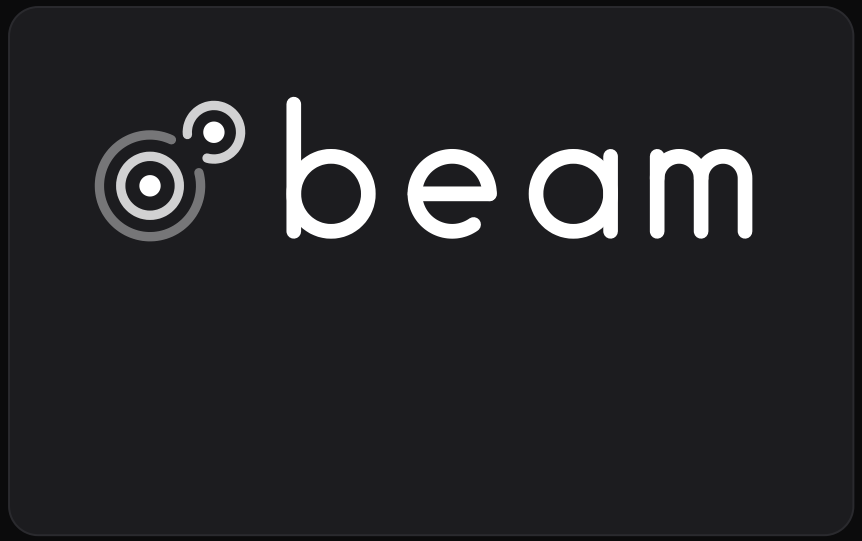

NestJS · Prisma · PostgreSQL · Next.js · MediaMTX · Livepeer · OBS · Expo · React Native

WHAT WE BUILT

- Accord Studio for broadcasters: an operator dashboard, relay of a single feed to several destinations at once, OBS support and a desktop app.
- The AccordMix listener app: listen or watch live, follow stations, replays, a personal library and search.
- Live rooms with chat, reporting and moderation.
- Background audio and home-screen widgets so a service keeps playing while the phone is in a pocket.
- A listener website for people without the app.

WHERE IT STANDS

Store listings for iPhone, iPad and Google Play were prepared in September 2026 and submission is in progress. The desktop broadcaster app is at v0.1.9.

OUR ROLE
Product design, backend, mobile app

PLATFORMS
iOS, Android, Web admin, API

STATUS
In development, Pre-launch build

Myone product · 2025 – 2026

● IN DEVELOPMENT

Beam

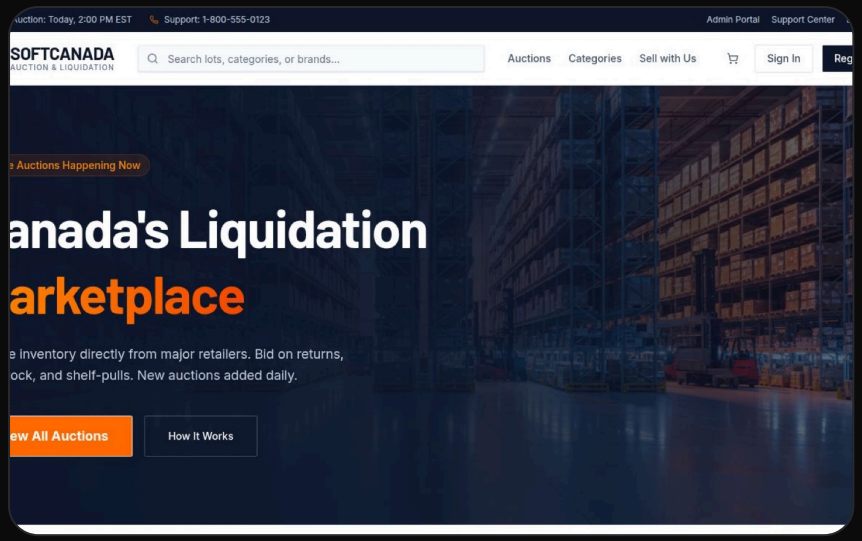

A hyper-local social network for Nigeria where posts are pinned to a place and a radius, with real-world incident signals, verified organisation hubs and a neighbourhood marketplace.

WHAT WE BUILT

- Beams: posts pinned to a location and radius that fade after a time or when the poster leaves the area.
- Echo, which boosts a Beam's reach beyond its radius.
- Radar Signals: sourced real-world incidents with follow-up updates, fed by news sources and the community.
- Verified Hubs for organisations, with badges and two-factor login.
- A marketplace, Factions (teams), nearby chat rooms, friends and direct messages.
- Moderation across text, image, video and audio, and a React admin panel to run it.

WHERE IT STANDS

In active development with the launch checklist in progress. Brand identity is complete; store listings follow once the beta closes.

SoftCanada Online Auctions, Canada · 2025 – 2026

● DELIVERED

SoftCanada Auctions

An online liquidation auction marketplace for the Canadian market, with real-time bidding, anti-sniping, proxy and assisted bidding, Stripe settlement and pickup and shipping logistics.

OUR ROLE
Full-stack build of the API, bidder portal and admin portal

PLATFORMS
Web, Admin portal, REST API

STATUS
Delivered, Backend feature-complete, portals in use

LINK
softcanadaauctions.ca

NestJS 11 · Prisma · PostgreSQL · Redis · Socket.IO · Stripe · Twilio · Cloudflare R2 · Puppeteer

WHAT WE BUILT

- Real-time bidding over websockets with soft-close anti-sniping, so a late bid extends the lot instead of stealing it.
- Proxy bidding and a Bid Assistant with Conservative, Aggressive and Snipe modes.
- Automatic admin bids that protect reserve prices.
- Invoices generated at auction close with buyer's premium and HST, rendered as PDF.
- Stripe payments, refunds and reconciliation.
- Pickup slots, shipment tracking and warehouse transfers.

WHERE IT STANDS

Delivered to the client with the backend feature-complete and both portals in use. Myone continues to support releases.

OUR ROLE
Full-stack build and AWS deployment

PLATFORMS
Web, Embeddable SDK, API

STATUS
Delivered, Deployed on AWS

LINK
On request

Laravel 11 · Inertia · Vue 3 · Jetstream · Laravel Vapor · AWS · Sentry

CompliTech Ltd, Nigeria · 2024 – 2025

● DELIVERED

CompliTech

A compliance portal where businesses register companies and business names, apply for tax identification and track applications, with a client-team model and an embeddable registration form for partners.

WHAT WE BUILT

- Guided application flows for company and business registration, from service choice to submission.
- A client model with invitations, client logins and per-client application history.
- Teams with their own pricing per registration type.
- A dashboard for the CompliTech team to work applications through to completion.
- An embeddable JavaScript SDK so partners can offer registration from their own pages.
- Payment webhooks so paid applications move forward without manual checks.

WHERE IT STANDS

Deployed and in use by the CompliTech team. Myone maintains the portal and the partner SDK.

IN THE LAB

Early-stage products we are building now.

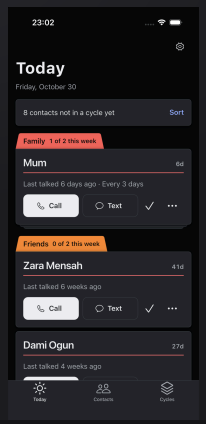

VeriGuard

WhatsApp · Telegram · Web · API

● IN DEVELOPMENT

VeriGuard

A scam and misinformation checker for Nigerians. Forward a link, screenshot, voice note or PDF on WhatsApp or Telegram and get back one clear verdict card.

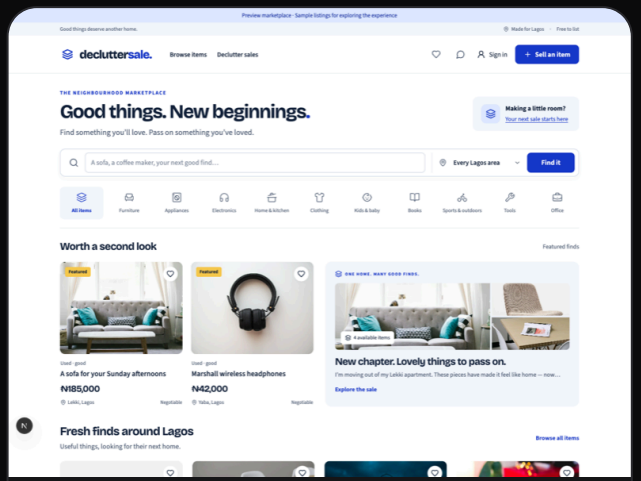

iOS · Android

● IN DEVELOPMENT

Bondz

A relationship-upkeep app that tells busy adults which few friends and family members to call or text today. Offline-first, private by design, and no AI.

Web

● IN DEVELOPMENT

DeclutterSale

A Lagos marketplace for second-hand household items: shareable declutter sales, bundle offers, realtime chat with counter-offers, timed reservations and paid featured listings.

EXPERIENCE

Where our team has built before Myone.

Sparkle	Core banking backend for a Nigerian digital bank: gateway API, business banking, transactions, bill payments, Esusu and savings products, loans and virtual accounts on a Fineract core, with Paystack, Mono and NIBSS integrations.	**Lead backend contributor** 2019 – 2025
NIBSS Instant Payments gateway	Spring Boot SOAP service connecting a bank to NIBSS NIP: name enquiry, inbound and outbound transfers, balance enquiry, account blocks and PGP-encrypted messaging, certified through Dev, UAT and Live.	**Built and integrated for Sparkle** 2020 – 2024
IvoryPay	B2B crypto on/off-ramp API: business onboarding and KYC, wallets, virtual bank accounts, payouts and mobile money, with USDT and USDC on Tron and Solana.	**Backend contributor** 2024
BOAT	gRPC and REST middleware between a lending platform and Mifos/Fineract: customer and wallet onboarding, wallet-to-bank transfers, bill payment, reversals, loan processing and repayment.	**Backend contributor** 2022

Engagements as an employee or contractor, listed for capability. They are not Myone clients.
